Melinda Miller-Thrasher, MD, FACOG

Weight Loss Options

Innovative Women clients choose our weight loss programs for many different reasons. We're glad you decided to take this step towards a healthier and more slender you.

We invite you to explore these options for creating a program that fits your lifestyle AND your budget.

Our balanced program includes physician supervision, nutritional counseling, and online resources to encourage proper eating. We strongly encourage incorporating proper fitness and other life style modifications to increase your chances of success. This ensures that you get to your desired weight and meet your health goals, thus decreasing your risk of developing hypertension, heart disease and diabetes.

We also believe that the changes that occur with a healthier you not only decrease your chances of chronic illness, but enhance your sense of self, leading to more satisfying relationships.

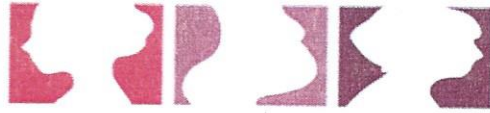

All of our programs begin with a comprehensive clinical assessment by a staff member, under the supervision of a physician. Baseline blood tests are also drawn and reviewed to ensure that you are fit to complete the programs. Once medically cleared, you can choose a la carte from the following products:

- HCG (for safe and effective weight loss)
- B-12 injections: Extremely popular!!! Improves metabolism, energy, muscle recovery, & stress relief
- Appetite Suppressants- Most commonly prescribed
 - Adipex 37.5 mg daily
90-120 day trial
Monthly visits
 - Belviq- 10 mg twice daily.
Free 15 Day trial Period
Monthly visits
- Body by Vi: A challenge that makes your health a priority for the next 90 days.

Get started!! Don't delay!! Make an Appointment Today !!
